

Nilai Tempat & Bilangan Besar (Konteks: Bisnis) - Bintang

Created: 8/4/2026

Student

Student: Bintang Nararya P Y

Topic: Nilai Tempat & Bilangan Besar (Konteks: Bisnis)

Status: completed

Lesson Plan

Learning Objectives

- Construct large numerical values up to millions based on business transaction scenarios.
- Analyze the place value of specific digits within multi-digit financial figures to determine their relative worth.
- Compare and order complex financial data sets to evaluate business performance.
- Solve real-world business problems by accurately reading and writing expanded forms of large numbers.

Lesson Information

Lesson Sections

1. Spiral Review Warm-up (10 minutes)

Teacher Script:

Hi Bintang! Great to see you today. Before we dive into our corporate empire, let's sharpen your mental tools. Since we are starting a fresh module, I have a few logic and arithmetic challenges for you. Check the whiteboard: 1) What is 15% of 200,000? 2) If a product costs 45,000 and you buy 3, what is the total? 3) Solve for x : $2x + 500 = 1500$. 4) If you save 1,500 every day for a week, how much do you have? Type your answers in the chatbox!

Activities:

- *Rapid-fire mental math chat challenge*
- *Whiteboard calculation of basic business logic*

2. Introduction & Real-World Connection (5 minutes)

Teacher Script:

Bintang, imagine you are the CEO of a tech startup. You aren't just dealing with hundreds or thousands anymore; you're dealing with millions of dollars in investment and revenue. If you misread a digit on a contract, you could lose millions. Today, we aren't just doing math; we are auditing your company's accounts. Are you ready to manage your first million?

Activities:

- *Discussion on the impact of place value errors in banking and business*

3. Review of Prior Knowledge (5 minutes)

Teacher Script:

Let's look at the number 543,210. Bintang, I'm going to circle the '4'. What is the name of that place value? Correct, Ten Thousands. Now, if I move that 4 one spot to the left, how many times larger does it become? Exactly, 10 times. Keep that 'Power of 10' rule in mind today.

Activities:

- *Identifying place values in 6-digit numbers*
- *Explaining the base-10 relationship*

4. Problem Introduction (10 minutes)

Teacher Script:

Here is our first corporate challenge. Your company, 'Bintang Tech,' just received an investment of 8,405,020. I want you to write this number out in words first. Then, break it down into its expanded form: How many millions? How many hundred-thousands? Be careful with those zeros—they are placeholders but they are vital!

Activities:

- *Converting numerical digits to word form*
- *Writing numbers in expanded notation (e.g., $8,000,000 + 400,000...$)*

5. Guided Practice (15 minutes)

Teacher Script:

Now, let's compare two quarterly reports. Report A says revenue was \$4,560,000. Report B says it was \$4,506,000. Which one is higher? Use the $>$ or $<$ symbols. Now, let's look at this figure: 9,723,150. If I tell you the '7' represents marketing costs, what is the actual value of that 7? Is it 7,000 or 700,000?

Activities:

- *Comparing large numbers using inequality symbols*
- *Determining the value of a specific digit in a business context*

6. Independent Practice (15 minutes)

Teacher Script:

It's Audit Time, CEO Bintang! I'm putting 5 transaction records on the screen. Some are in words, some in expanded form, and some in digits. Your task is to standardize them all into digits and then rank them from the highest revenue to the lowest. You have 10 minutes. Go!

Activities:

- *Converting mixed format numbers into standard digit form*
- *Ordering 7-digit numbers from greatest to least*

7. Consolidation & Reflection (5 minutes)

Teacher Script:

Fantastic work today, CEO. You managed millions without breaking a sweat. The most important thing to remember is that place value tells us the **weight** of a digit. Before you go, log in to <https://learn.algonova.id/login> to see your CEO dashboard and complete your audit homework. What was the trickiest part of today's numbers?

Activities:

- *Summary of key takeaways*
- *Login reminder and homework walkthrough*

Homework

Medium Questions:

1. Write the number 4,502,080 in words.
2. What is the value of the digit 7 in 7,890,123?
3. Expand the number 2,040,600 using addition (e.g., 2,000,000 + ...).
4. Compare using >, <, or =: 5,670,000 ____ 5,607,000.

Hard Questions:

1. A company has $3,000,000 + 50,000 + 400 + 7$. Write this as a standard number.
2. Identify the place value of the zero in 9,087,543. Why is it important?
3. Arrange these sales figures from least to greatest: 1,250,000; 1,025,000; 1,502,000; 1,205,000.
4. If you increase the digit in the ten-thousands place of 4,567,000 by 3, what is the new number?
5. Write a 7-digit number where the millions digit is 9, the thousands digit is 4, and all other digits are 0.
6. Create a real-world business scenario where misreading the hundreds-place as the thousands-place would cause a major problem.

Answer Key:

1. Four million, five hundred two thousand, eighty.
2. 7,000,000 (Seven Million).
3. $2,000,000 + 40,000 + 600$.
4. $>$ (5,670,000 is greater than 5,607,000).
5. 3,050,407.
6. Millions place; it acts as a placeholder to ensure other digits hold their correct value.
7. $1,025,000 < 1,205,000 < 1,250,000 < 1,502,000$.
8. 4,597,000 ($6 + 3 = 9$ in the ten-thousands place).
9. 9,004,000.
10. Answers vary, e.g., Paying a supplier \$10,000 instead of \$1,000 leads to a \$9,000 loss.

Parent Reminder

Bintang's Business Math Success!

Today, Bintang stepped into the role of a CEO! We mastered reading and writing numbers up to the millions in a business context. Bintang practiced auditing financial records and comparing large revenue figures. Please encourage Bintang to log in to <https://learn.algonova.id/login> to complete the 'CEO Audit' homework assignment.
